

Some facts about the water you drink

Contaminated water is real - each year in Australia there are violations to the Safe Drinking Water Act - involving over 20 percent of water treatment facilities - so the more you know about your water, the better you can protect your family.

According to the Australian Drinking Water Guidelines: "drinking water should ideally be, clear, colourless, and well aerated with no unpalatable taste or odours. It should contain no suspended matter, harmful chemical substances or pathogenic micro-organisms". Despite these guidelines our water supplies come to us at the point of consumption with many undesirable qualities.

Some of the contaminants an **ALPS** water filtration system can remove:

Heavy Metals - Heavy metals can be highly toxic to the human body and mind.

Bacteria & Protozoa - Examples include E.Coli, Coliforms, Cryptosporidium and Giardia. (N.B. Prill Beads must be used to achieve low bacteria levels)

Cadmium - Accumulates in the body over a long period & may cause stomach cramps, kidney & liver damage.

Chlorine - Used for the treatment of water supplies to eliminate many waterborne diseases.

Fluoride - The addition of fluoride to municipal water is banned in many nations but not Australia. Linked to many long-term health defects such as compromised thyroid and immune system degeneration. In high doses is lethal.

Lead - Lead contaminated water poses a serious health risk to all ages, including learning difficulties, behavioural problems, mental & physical retardation, hypertension, strokes & heart disease.

Mercury - Can cause ulcers, skin irritations, dental problems, internal bleeding, liver & kidney damage.

Copper - Can be toxic in high doses.

Nitrate - Linked to the use of fertilizers & or sewage contamination. Nitrate reacts with other chemicals & forms Nitrite within the digestive tract. It can then go on to form carcinogens.

Organic chemicals - Many of these originate from pesticides, weed killers, commercial & domestic waste.

Pharmaceuticals - Include pharmaceutical drugs, ingredients in cosmetics, food supplements, other personal care products associated with recycled water and many other chemicals we may not be aware of.

Why drink ALPS filtered water?

Drinking fresh, clean, chemical free, structured, energised and alkalisated ALPS water you will gain these benefits and more:

- **Great tasting, clean water**
- **Less bloating due to removal of contaminants**
- **Increased bodily hydration due to micro-clustering of the water molecules**
- **Increased energy levels**
- **Better skin complexion**
- **Less stress and fatigue**
- **Better sleep**
- **Improved mental clarity and concentration**
- **Healthier digestion**
- **Improved circulation**

*Fresh, clean, chemical free,
structured, energised and alkalisated,
high quality drinking water - 24/7*

www.alpswaterfilters.com.au

ALPS is a natural gravity fed water filtration system that is designed to remove all types of contaminants in tap water via an eleven stage filtration process. Lab tests conducted by Eurofins Melbourne showed almost no detectable sodium fluoride levels, or any other harmful or dangerous chemicals.

The ALPS water filter represents a NATURAL, simple, easily maintained and cost effective water filtration system that will provide you with a consistent supply of clean, refreshing drinking water, essential for general health, longevity and quality of life.

Assembly is simple along with a straight forward maintenance routine. All parts and components are inexpensive and readily available. Usually, domes and cartridges are replaced every 6 months, depending upon your tap water quality and quantity used. Mineral stones are generally replaced every 2 to 3 years.

And together with the (optional) use of PRILL BEADS*, the result is always fresh, clean, chemical free, structured, energised and alkalisied, high quality drinking water at your fingertips, 24/7

Improve your quality of life

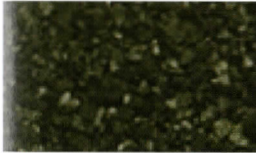

The ALPS Eleven-Stage Filtration System

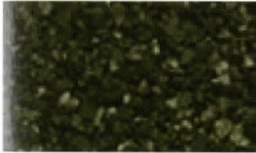

1. Ceramic Dome Filter with silver particles. Filters down to 0.2 of a micron and removes rust, dust, sand, silt and bacteria such as cholera, typhoid & coliforms

2. Activated Alumina (1st layer of cartridge). Adsorbs fluoride, arsenic, copper, zinc, lead & phosphates

3. Silver activated Carbon (2nd layer of cartridge). Absorbs chemicals and traps dirt, rust, silt, and chlorine

4. Silver activated Carbon (3rd layer of cartridge). Absorbs chemicals and traps dirt, rust, silt, and chlorine

5. Zeolite (4th layer of cartridge). Softens water. Adsorbs heavy metals and harmful elements such as Fluoride

6. Silica Sand (5th layer of cartridge). Promotes healthy bone, connective tissue and helps prevent premature's aging, cardiovascular and Alzheimer disease

7. Far Infra-Red Ceramic Balls (6th layer of cartridge). Help soften water and raise pH level. (To raise further and stabilise pH, PRILL BEADS* are required)

8-9. Mineral stones with silver particles in the bottom of the unit keeps the water fresh, alkaline and mineralised. Also reduces bacteria and viruses

10. Magnetic water Faucet. The magnets help restore the water's natural energy balance and microcluster the water for optimal hydration

*11. PRILL BEADS (Optional 11th Stage - Highly recommended)

To Raise the pH of ALPS filtered water even further to around pH 8.0 and stabilise it, PRILL BEADS must be used. Two bags of Prill Beads are required for the 12 Lt unit & three bags for the 18Lt unit. All are available on our website. Prill Beads last a LIFETIME, so they are a one-time purchase. Their benefits are truly amazing

What are Prill Beads?

Prill Beads are an *all-natural organic* energy enhanced water purifier and reconditioner that *restructures* drinking water on a cellular level to fully refresh, *hydrate* and revive the body.

Precious Prills are magnesium oxide infused with Life Force. Originally created to clean up nuclear waste, they are from a new technology that allows us to make very fine "**vital water**" from virtually any source. This water measurably *hydrates the body*, and has a favourable oxidation reduction potential (*reduces free radicals* in the body).

How Prill Beads Work:

The human body is mostly water; Prill works by both altering water's surface tension and chemical bonding to *remove heavy metals and toxins* that we ingest from water supplies, household and industrial chemicals, food pesticides and additives.

Prill Beads produce water that is *de-clustered* to virtually single molecules of water. When you drink Prill water, your *need for water is reduced* because you are getting maximum *hydrative benefit* from the water as it is going right into the cells of your body Prill beads change the structure of all chemicals and impurities in the water allowing the body to flush them out.

What Does Prill Water Do?

- prill beads raise the FREQUENCY of water
- Prill hydrates and moisturizes the cells by changing the surface tension of the water.
- Prill promotes age reversal
- Reduces wrinkles and age spots
- Because it's thin water it helps the body better absorb H2O
- Cleans out environmental toxins
- Gives the body life force (ynergy)
- Supports your health and beauty
- Can improve the libido
- Cleans up Mother Earth
